SUMMARY

Golang Developer with 2.5 years of commercial experience and strong DevOps engineering background (5+ years in IT). Designed and delivered infrastructure validation tool (InfraKit) serving 500+ servers across hybrid environments. Proven track record of optimizing CI/CD pipelines, reducing deployment time by 73% (45 to 12 minutes), and implementing monitoring solutions that improved system observability. Deep expertise in Go (goroutines, REST API design, network protocols), Kubernetes, Docker, and production-grade system design with focus on reliability and scalability. Mathematics/ML academic background, hackathon prize winner. Seeking challenging projects requiring systematic approach and deep technical immersion.

EXPERIENCE

Golang Developer

VK (Mail.ru Group)

November 2020 – Present, Russia

- Architected and developed InfraKit infrastructure validation platform in Go, serving 500+ servers across hybrid cloud environments and reducing manual validation time by 80%
- Implemented hybrid Pull-model architecture where agents autonomously request tasks from server, improving system reliability and reducing network overhead by 40%
- Built cross-platform agent (infrakit-agent) with modules for metrics collection, CPU/RAM/Disk validation, SELinux auditing, achieving 99.5% accuracy in infrastructure compliance checks
- Designed and implemented parallel network validation (ports, DNS, NTP) and Kubernetes environment auditing (CRI, CNI, CSI) using Goroutines, reducing validation time from 15 to 3 minutes per host
- Developed RESTful API for seamless integration with Deployer platform and external systems, handling 1000+ requests per minute
- Created automated reporting subsystem (JSON/HTML) providing real-time infrastructure health visualization for 50+ development teams
- Implemented YAML-based configuration system with inheritance logic, reducing configuration complexity by 60%
- Secured component communication through SSH tunneling, achieving SOC 2 compliance requirements
- Authored comprehensive unit tests achieving 85% code coverage and technical documentation adopted company-wide

DevOps Engineer

Home Credit Bank

November 2020 – August 2023, Russia

- Orchestrated full-cycle Kubernetes cluster deployment from stage to production, managing 100+ nodes and ensuring 99.9% uptime across critical banking services
- Led cluster version upgrades with zero downtime strategy, successfully migrating 15+ production clusters serving 5M+ daily transactions
- Designed and implemented custom Helm charts for Apache NiFi and NiFi-Registry deployment in Kubernetes, reducing deployment time by 65%
- Optimized Docker images for development teams, reducing average image size by 40% and container startup time by 50%
- Engineered TLS-enabled Mongo-UI solution by modifying source code, ensuring secure database management for compliance requirements
- Migrated and refactored Ansible roles for new OS version, automating deployment of 200+ servers and reducing provisioning time from 4 hours to 30 minutes
- Built GitLab CI/CD pipelines achieving 95% deployment success rate and reducing manual intervention by 80%
- Developed custom Jenkins Shared Libraries (JSL) adopted across 20+ projects, standardizing CI/CD processes and reducing pipeline development time by 50%
- Implemented comprehensive monitoring stack (Prometheus, VictoriaMetrics, Grafana, Loki) with 150+ custom dashboards, reducing MTTR by 60%
- Migrated from Prometheus to VictoriaMetrics, reducing storage costs by 70% while maintaining full metric history and backward compatibility
- Configured JMX Exporter for Cassandra, Apache Ignite and JVM applications, providing visibility into 50+ critical services
- Deployed and secured MinIO object storage with KMS encryption, managing 10TB+ of data with 99.99% availability
- Migrated Kafka clusters from etcd to KRaft coordination and implemented SASL-SSL authentication (SCRAM-SHA-256), improving cluster performance by 30%
- Automated NiFi flow synchronization from NiFi to NiFi-Registry to Git with auto-merge and approval workflows, eliminating manual sync errors
- Administered high-availability database clusters (MongoDB, PostgreSQL with Patroni, Cassandra, ZooKeeper, Apache Ignite) supporting 10M+ records
- Integrated Keycloak with LDAP for centralized authentication, managing 500+ user accounts across multiple applications
- Configured Apache Airflow with external Spark cluster integration via REST API and Livy, orchestrating 100+ daily data pipelines

DevOps Engineer

REG.RU, LLC

March 2020 – November 2020, Russia

- Managed Kubernetes worker nodes lifecycle (add/remove) with zero-downtime load redistribution across 30+ node clusters
- Maintained cluster stability and high availability, participating in incident resolution and achieving 99.8% uptime SLA
- Deployed monitoring solutions collecting metrics from 50+ applications and cluster components, improving issue detection speed by 70%

- Developed and maintained Helm charts for automated application deployment, reducing deployment errors by 85%
- Created optimized Docker images for development teams, reducing average image size by 35% and improving startup performance
- Configured Nginx reverse proxy with load balancing across backend servers, handling 100K+ requests per hour
- Implemented security best practices: SSL/TLS configuration, HTTP headers (HSTS, CSP), access restrictions and DDoS protection
- Authored Ansible playbooks automating routine tasks (service deployment, software updates, diagnostics), saving 15+ hours weekly
- Built and optimized GitLab CI/CD pipelines, reducing production delivery time by 73% (from 45 to 12 minutes)
- Developed PromQL queries and alerting rules monitoring service availability, resource consumption and application errors across 40+ services
- Created Grafana dashboards visualizing cluster health, infrastructure status and business metrics for stakeholders
- Configured Alertmanager routing notifications to Slack, Telegram and email based on on-call schedules and priority levels
- Provided infrastructure consulting to development teams on CI/CD setup, log analysis and monitoring best practices

EDUCATION

Bachelor's Degree in Applied Informatics

National University of Science and Technology MISIS • Moscow • 2024

Bachelor's Degree in Mathematics, Applied Mathematics

National University of Science and Technology MISIS (Moscow Institute of Steel and Alloys) • Moscow • 2022

CERTIFICATIONS

Huawei Certified ICT Associate – Routing & Switching 2020

SKILLS

Languages & Core: Go (Golang), Python, Bash, Groovy, SQL, PromQL

Security & Authentication: Keycloak, LDAP, SSL/TLS, SASL, KMS, SSH

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Apache Cassandra, Apache Kafka, Apache Airflow, Apache NiFi, ZooKeeper

DevOps & Cloud: Kubernetes, Docker, Helm, Terraform, Ansible, GitLab CI/CD, Jenkins, Git

Monitoring & Infrastructure: Prometheus, VictoriaMetrics, Grafana, Loki, Alertmanager, Nginx, HAProxy, Linux Administration
